Scientific Analysis Report

Lab Case #: SP-010986-10

Agency Case #: 86989-10

Case Officer: S [REDACTED] B [REDACTED]

Parish of Offense: East Baton Rouge

**AGENCY**

**Baton Rouge Police Department**

P.O. Box 2406  
Baton Rouge, LA 70821

**19th Judicial District, Parish of East Baton Rouge**

Office of the District Attorney  
222 St. Louis St.  
Baton Rouge, LA 70802-5878

**INDIVIDUALS**

Aramis Jackson - Suspect

**ANALYSIS REQUESTED** Firearms. This examination was completed on 10/19/2010.

**EVIDENCE SUBMITTED**

On 10/7/2010 at 4:12 PM, Crime Lab Technician M [REDACTED] P [REDACTED] received the following evidence from the Baton Rouge Police Department via S [REDACTED] B [REDACTED]:

Evidence Submission 0001: Exhibits 1&2 One sealed evidence envelope containing two "R-P .45 Auto" jacketed hollow point cartridges taken from Aramis Jackson's pocket on 8-27-2010.

**RESULTS AND CONCLUSIONS**

At the request of Baton Rouge Police Detectives, the two "R-P 45 Auto" jacketed hollow point cartridges (exhibits 1 & 2) were compared to the five "R-P 45 Auto" cartridge cases (exhibits 16H, 16I, 16J, 17B, and 18R in SP-10449-10; BRPD File # 97045-10). The case of the cartridge (exhibit 2) has a series of marks that is consistent with this cartridge being fed through the action of a firearm at least three times. The case of the cartridge (exhibit 1) does not have any "feed marks" suitable for comparison.

The case of the "R-P 45 Auto" cartridge (exhibit 2) and three of five "R-P 45 Auto" cartridge cases (exhibits 16H, 17B, & 18R in SP-10449-10; BRPD File # 97045-10) bear "feed marks" consistent with being cycled through the action of the same unknown firearm. At least two of the three feed marks are from this same unknown firearm. The third mark lacks sufficient detail to confirm whether it is or is not from the same firearm.

Bunter toolmarks present in the headstamp of the case of the "R-P 45 Auto" cartridge (exhibit 2) and in the headstamps of at least three of the five "R-P 45 Auto" cartridge cases (exhibits 16H, 16I & 18R in SP-10449-10; BRPD File # 97045-10) were determined to have a common manufacture origin. This type of association is common among cartridges from the same box of ammunition, or other boxes from the same production run.

No toolmark associations were made between the "R-P 45 Auto" jacketed hollow point cartridge (exhibit 1) and the five cartridge cases (exhibits 16H, 16I, 16J, 17B, and 18R in SP-10449-10; BRPD File # 97045-10).
